Lecture 20 – The Pumping Lemma for Context-Free Languages

COSE215: Theory of Computation

Jihyeok Park

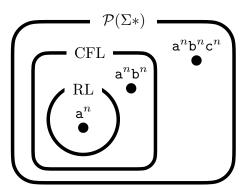

2024 Spring

- We have learned about the Pumping Lemma for Regular Languages (RLs).
- We could use it to **prove** that some languages are **NOT** regular.
- Is there a similar lemma for Context-Free Languages (CFLs)?
- Yes. We can use it to prove the following language is **NOT** a CFL:

$$L = \{a^n b^n c^n \mid n \ge 0\}$$

Size of Parse Trees in Chomsky Normal Form

Theorem (Size of Parse Trees in Chomsky Normal Form)

For a given CFG G in Chomsky Normal Form, for all $w \in L(G)$, if the length of the longest path in the parse tree of w is n, then $|w| \le 2^{n-1}$. Note that the length of a path is the number of edges in the path.

For example, consider the following CFG in CNF, and the parse tree of w = aabb. The length of the longest path in the parse tree is 4, and the length of the word is 4. Thus, $|w| = 4 \le 2^3 = 2^{n-1}$.

$$\begin{array}{cccc} S & \rightarrow & \epsilon \mid AC \mid AB \\ D & \rightarrow & AC \mid AB \\ C & \rightarrow & DB \\ A & \rightarrow & a \\ B & \rightarrow & b \end{array}$$

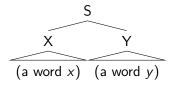

Size of Parse Trees of Chomsky Normal Form - Proxpers

Proof) Let's perform induction on the length of the longest path n.

• (Basis Case) n = 1. Then, $|\epsilon| = 0 \le 2^{1-1}$ and $|a| = 1 \le 2^{1-1}$.

• (Induction Case) The first rule of S is in the form of $S \to XY$. The length of the longest path in the parse tree of X (or Y) is less than or equal to n-1. If $X \Rightarrow^* x \in \Sigma^*$ and $Y \Rightarrow^* y \in \Sigma^*$, then $|x| \le 2^{n-2}$ and $|y| \le 2^{n-2}$ (: I.H.). Thus, $|w| = |x| + |y| \le 2^{n-2} + 2^{n-2} = 2^{n-1}$.

Pumping Lemma for Context-Free Languages

Lemma (Pumping Lemma for Context-Free Languages)

For a given CFL L, there exists a positive integer n such that for all $z \in L$, if $|z| \ge n$, there exists a split z = uvwxy such that

- 1 |vx| > 0
- $|vwx| \leq n$
- 3 $\forall i \geq 0$. $uv^i wx^i y \in L$

L is context-free

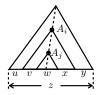

$$B = \exists n > 0. \ \forall z \in L. \ |z| \ge n \Rightarrow \exists z = uvwxy. \ 1 \land 2 \land 3$$

Proof of Pumping Lemma

- Let *L* be a context-free language.
- Then, \exists CFG G in Chomsky Normal Form. s.t. L(G) = L.
- Let $m \ge 0$ be the number of variables in G, and n be $2^m \ge 1$.
- Take any $z = a_1 a_2 \cdots a_k \in L$ s.t. $|z| = k \ge n$.
- Consider the longest path $A_1(=S), A_2, \cdots, A_p$ in the parse tree of z. Then, $p \ge m+1$ by Theorem of Size of Parse Trees in CNF.
- By Pigeonhole Principle, $\exists i, j$. s.t. $p m \le i < j \le p$ and $A_i = A_j$.
- Split the word z = uvwxy as follows:

$$p - m \le i < j \le p$$
 and
$$A_i = A_j$$

Proof of Pumping Lemma - 1 and 2

$$\begin{aligned} p - m &\leq i < j \leq p \\ \text{and} \\ A_i &= A_j \end{aligned}$$

- |1| |vx| > 0
 - Since i < j, the word vwx derived from A_i is not equal to the word w
 derived from A_i.
 - Thus, vx is not an empty word, and |vx| > 0.
- $|2|vwx| \le n$
 - Since $p m \le i$, the length of the longest path from A_i in the parse tree of z is p i + 1 is less than or equal to m + 1.
 - By Theorem of Size of Parse Trees in CNF, the length of the word vwx is less than or equal to $2^m = n$.

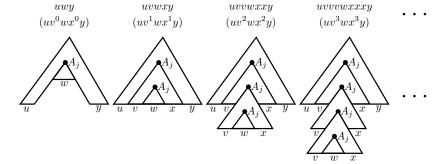

Proof of Pumping Lemma - ③

$$p - m \le i < j \le p$$
 and
$$A_i = A_j$$

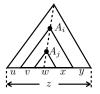

• $3 \forall i \geq 0. \ uv^i wx^i y \in L$

Proof of Pumping Lemma

- Let *L* be a context-free language.
- Then, \exists CFG G in Chomsky Normal Form. s.t. L(G) = L.
- Let $m \ge 0$ be the number of variables in G, and n be $2^m \ge 1$.
- Take any $z = a_1 a_2 \cdots a_k \in L$ s.t. $|z| = k \ge n$.
- Consider the longest path $A_1(=S), A_2, \cdots, A_p$ in the parse tree of z. Then, $p \ge m+1$ by Theorem of Size of Parse Trees in CNF.
- By Pigeonhole Principle, $\exists i, j$. s.t. $p m \le i < j \le p$ and $A_i = A_j$.
- Split the word z = uvwxy as follows. Then, it satisfies ①, ②, and ③.

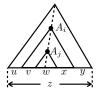

$$p - m \le i < j \le p$$
 and
$$A_i = A_j$$

Proof of Pumping Lemma

- Let L be a context-free language.
- Then, \exists CFG G in Chomsky Normal Form. s.t. L(G) = L.
- Let m > 0 be the number of variables in G, and n be $2^m > 1$.
- Take any $z = a_1 a_2 \cdots a_k \in L$ s.t. $|z| = k \ge n$.
- Consider the longest path $A_1(=S), A_2, \cdots, A_p$ in the parse tree of z. Then, $p \ge m+1$ by Theorem of Size of Parse Trees in CNF.
- By Pigeonhole Principle, $\exists i, j$. s.t. $p m \le i < j \le p$ and $A_i = A_j$.
- Split the word z = uvwxy as follows. Then, it satisfies (1), (2), and (3).

$$p-m \leq i < j \leq p$$
 and
$$A_i = A_j$$

Proving Languages are Not Context-Free

Lemma (Pumping Lemma for Context-Free Languages)

$$A = L$$
 is context-free \Downarrow $B = \exists n > 0. \forall z \in L. |z| \ge n \Rightarrow \exists z = uvwxy. 1 \land 2 \land 3$

$$\begin{array}{cccc}
A & \Longrightarrow & B & (0) \\
B & \Longrightarrow & A & (X) \\
\neg B & \Longrightarrow & \neg A & (0)
\end{array}$$

$$\neg B = \forall n > 0. \ \neg(\forall z \in L. \ |z| \ge n \Rightarrow \exists z = uvwxy. \ 1 \land (2) \land (3))$$

$$= \forall n > 0. \ \exists z \in L. \ \neg(|z| \ge n \Rightarrow \exists z = uvwxy. \ 1 \land (2) \land (3))$$

$$= \forall n > 0. \ \exists z \in L. \ |z| \ge n \land \neg(\exists z = uvwxy. \ 1 \land (2) \land (3))$$

$$= \forall n > 0. \ \exists z \in L. \ |z| \ge n \land \forall z = uvwxy. \ \neg((1) \land (2) \land (3))$$

$$= \forall n > 0. \ \exists z \in L. \ |z| \ge n \land \forall z = uvwxy. \ \neg((1) \land (2)) \lor \neg(3)$$

$$= \forall n > 0. \ \exists z \in L. \ |z| \ge n \land \forall z = uvwxy. \ ((1) \land (2)) \Rightarrow \neg(3)$$

Proving Languages are Not Context-Free

To prove a language L is **NOT** context-free, we need to show that

$$\forall n > 0. \exists z \in L. |z| \ge n \land \forall z = uvwxy. (1) \land (2) \Rightarrow \neg (3)$$

- 1 |vx| > 0
- $|vwx| \leq n$
- 3 $\forall i \geq 0$. $uv^i wx^i y \in L$

Note that $\neg (3) = \exists i \geq 0$. $uv^i wx^i y \notin L$.

We can prove this by following the steps below:

- f 1 Assume any positive integer n is given.
- **2** Pick a word $z \in L$.
- **3** Show that $|z| \geq n$.
- 4 Assume any split z = uvwxy is given $(1)|vx| > 0 \land (2)|vwx| \le n$.
- **5** ¬(3) Pick $i \ge 0$, and show that $uv^i wx^i y \notin L$ using (1) and (2).

Contents

1. Pumping Lemma for Context-Free Languages

Size of Parse Trees in Chomsky Normal Form

Pumping Lemma

Proof of Pumping Lemma

Application: Proving Languages are Not Context-Free

2. Examples

Example 1: $L = \{a^nb^nc^n \mid n \ge 0\}$

Example 2: $L = \{0^n 10^n 10^n \mid n \ge 0\}$

Example 3: $L = \{ww \mid w \in \{a, b\}^*\}$

Example 4: $L = \{a^n b^m \mid m = n^2\}$

Example 5: $L = \{ w \in \{ a, b, c \}^* \mid N_a(w) = N_b(w) = N_c(w) \}$

Let's prove that L is **NOT** context-free using the Pumping Lemma:

$$L = \{a^n b^n c^n \mid n \ge 0\}$$

- \bigcirc Assume any positive integer n is given.
- 2 Let $z = a^n b^n c^n \in L$.
- 3 $|z| = n + n + n = 3n \ge n$.
- 4 Assume any split z = uvwxy is given, and $1 |vx| > 0 \land 2 |vwx| \le n$.
- **5** Let i = 0. We need to show that $\neg \bigcirc 3 uv^0wx^0y \notin L$:
 - Since $2 |vwx| \le n$,

$$vx = a^p b^q$$
 (or $vx = b^p c^q$)

where $0 \le p, q \le n$.

- Since (1) |vx| > 0, we can remove at least one a or b (or b or c) from z without changing the number of c's (or a's) when i = 0.
- It means that $uv^0wx^0v \notin L$.

Let's prove that L is **NOT** context-free using the Pumping Lemma:

$$L = \{0^n 10^n 10^n \mid n \ge 0\}$$

- \bigcirc Assume any positive integer n is given.
- **2** Let $z = 0^n 10^n 10^n \in L$.
- $|z| = n + 1 + n + 1 + n = 3n + 2 \ge n.$
- **4** Assume any split z = uvwxy is given, and $1 |vx| > 0 \land 2 |vwx| \le n$.
- **6** Let i = 0. We need to show that $-3 uv^0wx^0y \notin L$:
 - Since $2 |vwx| \le n$,

vx cannot cover the third block (or the first block) consisting of 0's.

- Since $\bigcirc{1}|vx| > 0$, we can remove at least one 0 in the first or second blocks (or second or third blocks) from z without changing the number of 0's in the third block (or first block) when i = 0.
- It means that $uv^0wx^0y \notin L$.

Let's prove that L is **NOT** context-free using the Pumping Lemma:

$$L = \{ww \mid w \in \{\mathtt{a},\mathtt{b}\}^*\}$$

- 2 Let $z = a^n b^n a^n b^n \in L$.
- 3 $|z| = n + n + n + n = 4n \ge n$.
- **4** Assume any split z = uvwxy is given, and $1 |vx| > 0 \land 2 |vwx| \le n$.
- **6** Let i = 0. We need to show that $-3 uv^0wx^0y \notin L$:
 - Since $2 |vwx| \le n$,

vx cannot cover both two different blocks consisting of a's (or b's).

- Since $\bigcirc |vx| > 0$, we can remove at least one a (or b) in one block from z without changing the other one when i = 0.
- It means that $uv^0wx^0v \notin L$.

Let's prove that L is **NOT** context-free using the Pumping Lemma:

$$L = \{a^n b^m \mid m = n^2\}$$

- $oldsymbol{1}$ Assume any positive integer n is given.
- **2** Let $z = a^n b^{n^2} \in L$.
- 3 $|z| = n + n^2 \ge n$.
- 4 Assume any split z = uvwxy is given, and $1 |vx| > 0 \land 2 |vwx| \le n$.
- **5** Let i = n + 1. We need to show that $\neg \bigcirc 3$ $uv^{n+1}wx^{n+1}y \notin L$:
 - Let's use proof by contradiction. Assume that $uv^{n+1}wx^{n+1}y \in L$.
 - Since $2 |vwx| \le n$, $v = a^p$ and $x = b^q$ for some $0 \le p, q \le n$, and:

$$uv^{n+1}wx^{n+1}y = a^{n+np}b^{n^2+nq} \in L$$

Then,
$$(n + np)^2 = n^2 + nq \Rightarrow n^2p^2 + 2n^2p = nq \Rightarrow n(p^2 + 2p) = q$$
.

• Since $\bigcirc 1 |vx| > 0$, p > 0 or q > 0. However, q > n if p > 0 and q = 0 if p = 0. Therefore, we have a contradiction.

Let's prove that *L* is **NOT** context-free:

$$L = \{w \in \{\mathtt{a},\mathtt{b},\mathtt{c}\}^* \mid \mathit{N}_\mathtt{a}(w) = \mathit{N}_\mathtt{b}(w) = \mathit{N}_\mathtt{c}(w)\}$$

where $N_a(w)$, $N_b(w)$, and $N_c(w)$ are the number of a's, b's, and c's in w.

- It is much easier to prove that *L* is **NOT** context-free by using the **closure properties** under **intersection** with regular languages.
- Consider a regular expression $R = a^*b^*c^*$ and its language:

$$L(R) = \{a^i b^j c^k \mid i, j, k \ge 0\}$$

- If L is context-free, then $L \cap L(R)$ must be context-free as well because of the closure under intersection with regular languages.
- However, we know that the following language is NOT context-free:

$$L \cap L(R) = \{a^n b^n c^n \mid n \ge 0\}$$

• Since it is a contradiction, L is **NOT** context-free.
